

HOW THE POLL WAS CONDUCTED

This poll was conducted by Mason-Dixon Polling & Research, Inc. of Washington, D.C. from May 3 through May 5, 2010. A total of 625 registered voters were interviewed statewide by telephone. All stated they vote regularly in state elections.

Those interviewed were selected by the random variation of the last four digits of telephone numbers. A cross-section of exchanges was utilized and quotas were assigned to reflect voter turn-out by county.

The margin for error, according to standards customarily used by statisticians, is no more than plus or minus 4 percentage points. This means that there is a 95 percent probability that the "true" figure would fall within that range if all voters were surveyed. The margin for error is higher for any subgroup, such as a gender or party grouping.

This survey also includes an over-sampling of 400 likely Democratic primary voters and 400 likely Republican primary voters. Only the questions relative to the primary election races were asked of these additional voters, and not the questions concerning the general election. The margin for error for each primary voter sample is plus or minus 5%.
